DETAILED ACTION

Response to Amendment

1. To expedite prosecution, it is requested that applicant provide an amendment (similar to that of the amendment filed under article 34) to the US application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Plumeret et al. [US 5,289,46] in view of Gschlössl [US 4,994,725].

Plumeret et al. discloses a contactor apparatus for an electric motor [figure 9] comprising:

- a body [figure 2];
- at least three power terminals [22-24] connected to three-phase power lines [R, S and T] and insulated from one another;
- at least three main starting terminals [15-17] respectively connected to terminals of a three-phase motor [M];

Art Unit: 2832

- at least three star-delta terminals [25-27] connected to the three-phase motor;
- an electromagnet for a main circuit [7];
- an electromagnet for the star-delta terminals [6]; and
- main and star-delta circuit switching units [figure 3].

Plumeret et al. disclose the instant claimed invention except for: the specific arrangement of the terminals on the body.

Gschlössl discloses a drive arrangement having motor terminals mounted on an opposite end of the body than the power terminals.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the mounting arrangement of Gschlössl for the terminals of Plumeret et al. for the purpose of improving isolation.
